Capital Growth Management
Limited Partnership

To Our Shareholders:

CGM Focus Fund increased 4.2% during the third quarter of 2016 compared to a return of 3.9% for the Standard and Poor's 500 Index ("S&P 500 Index").

The third quarter began with U.S. stocks continuing to move up from their lows of early February. We believe much of this growth can be attributed to sustained positive employment numbers and depressed bond yields. The Labor Department reported on July 8 that U.S. employers added an additional 287,000 jobs in June. The unemployment rate for June was 4.9%, which was up slightly from May's unemployment rate of 4.7%, but this increase was likely due to workers who had dropped out of the workforce for an extended period who now resumed their job searches as employment conditions improved. The Labor Department's June labor force participation rate bears this out with a slight increase to 62.7%. In addition, private industry wages in June increased 2.6% from a year earlier, which is the fastest annual growth since 2009. Improving employment conditions and increasing wages helped keep consumer spending strong. Consumer spending accounts for approximately two-thirds of U.S. economic output and has continued to be the primary driver of growth since the end of the recession. On July 29, the Commerce Department reported that consumer spending grew 4.2% in the second quarter. Meanwhile overseas, central banks in Europe and Japan continued their policies of low and even negative interest rates in an attempt to boost economic growth. These policies helped hold U.S. government bond yields down making U.S. stocks seem more desirable.

U.S. stock prices largely stagnated in August amid mixed economic reports and minimal inflationary pressure. On August 12 the Labor Department released the Producer Price Index, which showed a

drop of 0.4% for the month of July. Similarly, the August 16 Labor Department release of the Consumer Price Index showed no change for the month of July on a seasonally adjusted basis. U.S. corporate earnings reports for the second quarter were generally mediocre as energy companies continued to struggle and industrial production remained relatively weak. The Commerce Department reported in late August that orders for durable goods increased a seasonally adjusted 4.4% for the month of July, which is also an indicator of a strengthening manufacturing sector. The U.S. consumer continued to sustain economic expansion. The Commerce Department reported a seasonally adjusted increase of 0.3% in consumer spending for the month of July. Sustained consumer spending should encourage expanding business investment which, in turn should increase U.S. worker productivity and economic growth.

Through the end of the quarter, U.S. stock prices tended to move on news and speculation regarding whether the Federal Reserve would raise short term interest rates at its September meeting. The Fed ultimately left rates unchanged, pushing stocks higher and bond yields lower. Indicating that it still expects short term interest rates to rise before year-end, the Fed set forth a generally positive outlook for the U.S. economy, citing expanding growth since the first half of the year, a growing U.S. labor force and rising incomes. The Census Bureau provided encouraging evidence of improving household incomes with a September 13 report indicating median household incomes increased 5.2% from a year earlier, after adjustments for inflation. This is the first significant rise in household income in several years and an apparent consequence of continued job growth. Improving household incomes also suggest the

CGM FOCUS FUND

potential for continued strength in consumer spending. An additional sign that the U.S. consumer continues to sustain economic growth arrived with the Conference Board's September Consumer Confidence Index reading, which reached its highest level in nine years with an increase to a seasonally adjusted 104.1. Global central bank economic stimulus policies also affected stock prices through the end of the third quarter. The stock market reacted poorly to the European Central Bank's decision to maintain and not expand its current bond buying and interest rate policy. Meanwhile the market welcomed the Bank of Japan's aggressive measures to fuel inflation, which was announced the same day that the Fed announced it would leave interest rates unchanged. Overall, the positive consumer outlook and rising investor confidence pushed stocks up at the end of the quarter, driven in part, by increases in the banking sector, which started to recover from its rough ride through the first half of 2016.

The yield on the 10 year U.S. Treasury was 1.46% on July 1 and on July 5 briefly dropped to its lowest level ever at 1.37%. Historically low global government bond yields and stimulative central bank activities including aggressive bond purchasing and negative yield policies, have propelled government bond investment to U.S. Treasuries. The 10-year U.S. Treasury closed the quarter with a 1.60% yield. On September 30, the S&P 500 Index was priced at 24.8 times the trailing twelve month earnings. While stock prices remain above their ten-year averages, sustained low bond yields continue to make stocks more attractive for investment.

On September 30, 2016, CGM Focus Fund was 22% invested in commercial banks, 12.1% invested in broker/dealers and 11.3% invested in electronic components. The Fund's three largest holders were Citigroup Inc. (commercial bank), Morgan Stanley

(broker/dealers) and Bank of America Corporation (commercial bank). At the end of the quarter 13.4% of the portfolio was invested in U.S. Treasury bonds sold short.

- (a) Security valuation — Equity securities are valued on the basis of valuations furnished by a pricing service, authorized by the Board of Trustees (the “Board”). Equity securities listed or regularly traded on a securities exchange or in the over-the-counter (“OTC”) market are valued at the last quoted sale price or, for certain markets, the official closing price at the time the valuations are made. A security that is listed or traded on more than one exchange is valued at the quotation on the exchange determined to be the primary market for such security. For securities with no sale reported, the last reported bid price is used for long positions and the last reported ask price for short positions. Corporate debt securities (other than short-term obligations purchased with an original or remaining maturity of sixty days or less) are valued on the basis of valuations furnished by a pricing service, authorized by the Board, which determines valuations for normal, institutional-size trading units of such securities using market information, transactions for comparable securities and various relationships between securities which are generally recognized by institutional traders. United States government debt securities held long are valued at the current closing bid and if held short are valued at the current closing ask, as last reported by a pricing service approved by the Board. Short-term investments purchased with an original or remaining maturity of sixty days or less are valued at amortized cost, which approximates value.

When current market prices or quotations are not readily available or do not accurately reflect fair value, valuations may be determined in accordance with procedures adopted by the Board. For example, when developments occur between the close of a market and the close of the New York Stock Exchange (“NYSE”) that may materially affect the value of some or all of the securities, or when trading in a security is halted, these procedures may be used. The frequency with which these procedures are used is unpredictable.

CGM FOCUS FUND

These valuation procedures may result in a change to a particular security's assigned level within the fair value hierarchy described below. The value of securities used for net asset value ("NAV") calculation under these procedures may differ from published prices for the same securities.

The Fund may use valuation techniques consistent with the market, income, and cost approach to measure fair value. The market approach uses prices and other relevant information generated by market transactions involving identical or comparable assets or liabilities. The income approach uses valuation techniques to convert future amounts (cash flows, earnings) to a single present amount. The cost approach is based on the amount that currently would be required to replace the service capacity of an asset. To increase consistency and comparability in fair value measurements and related disclosure, the Fund utilizes a fair value hierarchy which prioritizes the various inputs to valuation techniques used to measure fair value into three broad levels:

- Level 1 - Prices determined using: quoted prices in active markets for identical securities that the Fund has the ability to access at the measurement date. Valuation adjustments are not applied to Level 1 investments.
- Level 2 - Prices determined using: other significant observable inputs (including quoted prices for similar securities, interest rates, prepayment spreads, credit risk, etc.).
- Level 3 - Prices determined using: significant unobservable inputs, including the Fund's own assumptions and judgment in determining the fair value of investments. In situations where quoted prices or observable inputs are unavailable (for example, when there is little or no market activity for an investment at the end of the period), unobservable inputs may be used. Unobservable inputs reflect the Fund's own assumptions about the factors market participants would use in pricing an investment, and would be based on the best information available in the circumstances. Investments falling into the Level 3 category are primarily supported by quoted prices from brokers and dealers participating in the market for those investments. However, these may be classified as Level 3 investments due to lack of market transparency and corroboration to support these quoted prices. Additionally, valuation models may be used as the pricing source for any remaining investments classified as Level 3. These models rely on one or more significant unobservable inputs and/or significant assumptions by Capital Growth Management Limited Partnership, the Fund's investment adviser ("CGM"). Inputs used in valuations may include, but are not limited to, financial statement analysis, capital account balances, discount rates and estimated cash flows, and comparable company data.

The inputs or methodology used for valuing securities are not necessarily an indication of the risk associated with investing in those securities. The following is a summary of the inputs used to value the Fund's investments as of September 30, 2016:

CGM FOCUS FUND

Classification	Valuation Inputs		
	Level 1 - Quoted Prices	Level 2 - Other Significant Observable Inputs	Level 3 - Significant Unobservable Inputs
Investments in Securities-Assets			
Common Stocks*	\$ 926,903,590	—	—
Short-Term Investment Repurchase Agreement	—	\$ 7,255,000	—
Total	<u>\$ 926,903,590</u>	<u>\$ 7,255,000</u>	<u>—</u>
Investments in Securities-Liabilities			
Common Stocks*	\$ 24,637,500	—	—
Bonds United States Treasury Bonds	—	\$ 110,846,680	—
Total	<u>\$ 24,637,500</u>	<u>\$ 110,846,680</u>	<u>—</u>

* All common stocks held in the Fund are Level 1 securities. For a detailed break-out of common stocks by major industry classification, please refer to the Schedule of Investments.

For the nine months ended September 30, 2016, there were no transfers among Levels 1, 2 and 3.

- (b) A portion of this security has been segregated as collateral in connection with short sale investments. The market value of securities held in a segregated account at September 30, 2016 was \$341,804,500 and the value of cash held in a segregated account was \$31,811,512.
- (c) Non-income producing security.
- (d) The Fund enters into repurchase agreements, under the terms of a Master Repurchase Agreement, secured by U.S. Government or Agency securities, which involve the purchase of securities from a counterparty with a simultaneous commitment to resell the securities at an agreed upon date and price. Certain repurchase agreements are tri-party arrangements whereby the collateral is held in a segregated account for the benefit of the Fund and on behalf of the counterparty. Repurchase agreements afford the Fund the opportunity to earn a return on temporarily available cash at minimal market risk. While the underlying security may be a bill, certificate of indebtedness, note or bond issued by an agency, authority or instrumentality of the U.S. Government, the obligation of the seller is not guaranteed by the U.S. Government and there is a risk that the seller may fail to repurchase the underlying security. Consequently, there may be possible delays or restrictions upon the Fund's ability to dispose of the underlying securities. Upon an event of default under the Master Repurchase Agreement, the Fund would attempt to exercise its rights with respect to the underlying security, including taking possession of the cash and/or collateral provided by the seller. At

CGM FOCUS FUND

September 30, 2016, the Fund had an investment in a repurchase agreement for which the value of the related collateral exceeded the value of the repurchase agreement.

- (e) Federal Tax Information: At September 30, 2016, the net unrealized appreciation on investments held long, based on cost of \$905,296,338 for Federal income tax purposes was as follows:

Aggregate gross unrealized appreciation for all investments in which there is an excess of value over tax cost.....	\$ 46,961,125
Aggregate gross unrealized depreciation for all investments in which there is an excess of tax cost over value	(18,098,873)
	<u>\$ 28,862,252</u>

The cost basis and unrealized appreciation/(depreciation) for the Schedule of Investments and tax purposes differ due to differing treatments of wash sale losses deferred.

ADR: American Depositary Receipt - a certificate issued by a U.S. bank representing the right to receive securities of the foreign issuer described. The values of ADRs are significantly influenced by trading on exchanges not located in the United States or Canada.
