Limited Partnership

To Our Shareholders:

CGM Focus Fund increased 24.1% during the first quarter of 2021 compared to the Standard and Poor's 500 Index (S&P 500 Index) which increased 6.2%.

The market enjoyed a strong start to the new year with stocks closing at record levels at the end of the first week of January. An uptick in new orders for goods and early signs of recovery in global trade at the end of 2020 fueled a rise in global factory output into the new year. The Federal Reserve Board reported industrial production rose 1.6% in December while the Institute for Supply Management disclosed U.S. manufacturing activity grew to its highest level in more than two years. Rising government bond yields and the prospect of more government spending to fight the effects of the COVID-19 pandemic, in addition to the \$900 billion stimulus already passed in December, raised the possibility of inflation, and boosted cyclical stocks like banks and energy companies. Though the Commerce Department reported the U.S. economy contracted by 3.5% in 2020, its first annual decline in eleven years, the fourth quarter of the year delivered an impressive 4.3% increase in GDP. But, by the end of January 2021, a resurgence in virus cases prompted the renewal of some state business restrictions and stocks pulled back to end the month slightly lower.

Stocks rebounded quickly in early February as corporate earnings reports exceeded expectations and employment numbers began to show improvement. In early February, the Labor Department reported weekly unemployment claims dropped for a third consecutive week as layoffs started to ease. Some state pandemic restrictions were lifted and vaccine production ramped up dramatically. The Commerce Department

announced retail sales grew at a 7.6% pace in January and household income also rose by 10%. The market surged as budding consumer demand was bolstered by the potential for additional spending following congressional approval of President Biden's \$1.9 trillion economic stimulus plan. The Fed reaffirmed that it intends to continue supporting the economy by holding interest rates near zero and continuing its bond purchase program for the foreseeable future. The likelihood of massive government spending and the growth in corporate earnings continued to push bond yields up from their historic lows. Rising yields and inflation worries, despite Fed reassurance, drove investors away from technology stocks, which had powered the market recovery in 2020. A sharp downturn in the technology sector ultimately expanded to most of the market and stocks briefly retreated from their highs.

Government bond yields continued to impact the market through the end of the quarter. As yields stalled briefly at the start of March, stocks jumped to their best one-day performance in nearly nine months. Strengthening gains in the labor market increased optimism. The Labor Department reported the unemployment rate dropped to 6.2% and employers added 379,000 jobs in February. The report also revised the estimated number of jobs added in January from 49,000 to 166,000. February's job growth was the best since last fall and driven largely by hiring at restaurants and other hospitality businesses. While the service sector lagged early in the economic recovery, rising vaccinations numbers and easing business restrictions led to more bookings at restaurants and hotels and growth in consumer spending on services. In early March, the Institute for Supply

CGM FOCUS FUND

Management described a steadily expanding U.S. service sector in both January and February. Stocks reached new records in response to accelerated vaccine production and wider vaccination eligibility along with the passage of the government's virus relief package. The final legislation provides in part for \$1,400 in stimulus payments to most Americans and an extension of unemployment aid and the child tax credit for one year as well as funding for schools, local governments and vaccine distribution. At the close of the quarter, growing consumer confidence and improving economic conditions pushed the market to close near its record high.

The 10-year U.S. Treasury bond yielded 0.9% at the beginning of the quarter and climbed steadily to finish the quarter at 1.7%. The yield rose in response to increased government spending and the expectation of economic growth and potential inflation. The S&P 500 was priced at 39.9 times the trailing twelve-month earnings at the end of the quarter. While the market is priced at a historically high level, there are still companies with low valuations that we believe will provide significant growth opportunities in an expanding economy.

On March 31, 2021, CGM Focus Fund was 15.6% invested in commercial banks, 13.5% invested in steel and 8.3% invested in auto and related. The Fund's three largest holdings were WestRock Company (packaging), Bank of America Corporation and JPMorgan Chase & Co. (commercial banks).

- (a) Security valuation — Equity securities are valued on the basis of valuations furnished by a pricing service, authorized by the Board of Trustees (the “Board”). Equity securities listed or regularly traded on a securities exchange or in the over-the-counter (“OTC”) market are valued at the last quoted sale price or, for certain markets, the official closing price at the time the valuations are made. A security that is listed or traded on more than one exchange is valued at the quotation on the exchange determined to be the primary market for such security. For securities with no sale reported, the last reported bid price is used for long positions and the last reported ask price for short positions. Corporate debt securities are valued on the basis of valuations furnished by a pricing service, authorized by the Board, which determines valuations for normal, institutional-size trading units of such securities using market information, transactions for comparable securities and various relationships between securities which are generally recognized by institutional traders. United States government debt securities are valued at the current closing bid, as last reported by a pricing service approved by the Board.

When current market prices or quotations are not readily available or do not accurately reflect fair value, valuations may be determined in accordance with procedures adopted by the Board. For example, when developments occur between the close of a market and the close of the New York Stock Exchange (“NYSE”) that may materially affect the value of some or all of the securities, or when trading in a security is halted, these procedures may be used. The frequency with which these procedures are used is unpredictable. These valuation procedures may result in a change to a particular security’s assigned level within the fair value hierarchy described below. The value of securities used for net asset value (“NAV”) calculation under these procedures may differ from published prices for the same securities.

The Fund may use valuation techniques consistent with the market, income, and cost approach to measure fair value. The market approach uses prices and other relevant information generated by market transactions involving identical or comparable assets or liabilities. The income approach uses valuation techniques to convert future amounts (cash flows, earnings) to a single present amount. The cost approach is based on the amount that currently would be required to replace the service capacity of an asset. To increase consistency and comparability in fair value measurements and related disclosure,

CGM FOCUS FUND

the Fund utilizes a fair value hierarchy which prioritizes the various inputs to valuation techniques used to measure fair value into three broad levels:

- Level 1 - Prices determined using: quoted prices in active markets for identical securities that the Fund has the ability to access at the measurement date. Valuation adjustments are not applied to Level 1 investments.
- Level 2 - Prices determined using: other significant observable inputs (including quoted prices for similar securities, interest rates, prepayment spreads, credit risk, etc.).
- Level 3 - Prices determined using: significant unobservable inputs, including the Fund's own assumptions and judgment in determining the fair value of investments. In situations where quoted prices or observable inputs are unavailable (for example, when there is little or no market activity for an investment at the end of the period), unobservable inputs may be used. Unobservable inputs reflect the Fund's own assumptions about the factors market participants would use in pricing an investment, and would be based on the best information available in the circumstances. Investments falling into the Level 3 category are primarily supported by quoted prices from brokers and dealers participating in the market for those investments. However, these may be classified as Level 3 investments due to lack of market transparency and corroboration to support these quoted prices. Additionally, valuation models may be used as the pricing source for any remaining investments classified as Level 3. These models rely on one or more significant unobservable inputs and/or significant assumptions by Capital Growth Management Limited Partnership, the Fund's investment adviser ("CGM"). Inputs used in valuations may include, but are not limited to, financial statement analysis, capital account balances, discount rates and estimated cash flows, and comparable company data.

CGM FOCUS FUND

The inputs or methodology used for valuing securities are not necessarily an indication of the risk associated with investing in those securities. The following is a summary of the inputs used to value the Fund's investments as of March 31, 2021:

Classification	Valuation Inputs		
	Level 1 - Quoted Prices	Level 2 - Other Significant Observable Inputs	Level 3 - Significant Unobservable Inputs
Investments in Securities-Assets			
Common Stocks*	\$ 392,178,540	—	—
Total:.....	\$ 392,178,540	—	—

* All common stocks held in the Fund are Level 1 securities. For a detailed break-out of common stocks by major industry classification, please refer to the Schedule of Investments.

(b) Non-income producing security.

(c) Federal Tax Information: At March 31, 2021, the net unrealized appreciation on investments, based on cost of \$344,672,810 for Federal income tax purposes was as follows:

Aggregate gross unrealized appreciation for all investments in which there is an excess of value over tax cost	\$ 51,614,956
Aggregate gross unrealized depreciation for all investments in which there is an excess of tax cost over value	(4,109,226)
	\$ 47,505,730

The cost basis and unrealized appreciation/(depreciation) for the Schedule of Investments and tax purposes differ due to differing treatments of wash sale losses deferred.

ADR: American Depositary Receipt - a certificate issued by a U.S. bank representing the right to receive securities of the foreign issuer described. The values of ADRs are significantly influenced by trading on exchanges not located in the United States or Canada.
